

"Female Workers of Lowell," *The Harbinger*

November 14, 1836

[Consider These Questions](#)

Background

This is a selection from a magazine report investigating the textile mills of Lowell, Massachusetts, and Manchester, New Hampshire.

We have lately visited the cities of Lowell [MA] and Manchester [NH] and have had an opportunity of examining the factory system more closely than before. We had distrusted the accounts which we had heard from persons engaged in the labor reform now beginning to agitate New England. We could scarcely credit the statements made in relation to the exhausting nature of the labor in the mills, and to the manner in which the young women -- the operatives -- lived in their boardinghouses, six sleeping in a room, poorly ventilated.

We went through many of the mills, talked particularly to a large number of the operatives, and ate at their boardinghouses, on purpose to ascertain by personal inspection the facts of the case. We assure our readers that very little information is possessed, and no correct judgments formed, by the public at large, of our factory system, which is the first germ of the industrial or commercial feudalism that is to spread over our land. . . .

In Lowell live between seven and eight thousand young women, who are generally daughters of farmers of the different states of New England. Some of them are members of families that were rich in the generation before. . . .

The operatives work thirteen hours a day in the summer time, and from daylight to dark in the winter. At half past four in the morning the factory bell rings, and at five the girls must be in the mills. A clerk, placed as a watch, observes those who are a few minutes behind the time, and effectual means are taken to stimulate to punctuality. This is the morning commencement of the industrial discipline (should we not rather say industrial tyranny?) which is established in these associations of this moral and Christian community.

At seven the girls are allowed thirty minutes for breakfast, and at noon thirty minutes more for dinner, except during the first quarter of the year, when the time is extended to forty-five minutes. But within this time they must hurry to their boardinghouses and return to the factory, and that through the hot sun or the rain or the cold. A meal eaten under such circumstances must be quite unfavorable to digestion and health, as any medical man will inform us. After seven o'clock in the evening the factory bell sounds the close of the day's work.

Thus thirteen hours per day of close attention and monotonous labor are extracted from the young women in these manufactories. . . . So fatigued -- we

should say, exhausted and worn out, but we wish to speak of the system in the simplest language -- are numbers of girls that they go to bed soon after their evening meal, and endeavor by a comparatively long sleep to resuscitate their weakened frames for the toil of the coming day.
